

How Good Corporate Citizenship Fits with Existing NHS Requirements

The Good Corporate Citizenship Assessment Model is the newest of a range of instruments which have been developed in recent years to assist NHS organisations in meeting policy objectives by providing a mechanism for assessing current performance against criteria and by making it possible for organisations to compare themselves against comparable organisations and identify areas for improvement. However the model has been developed to ensure that it does not place any new duties or responsibilities on NHS organisations, which have not been covered in other national performance assessment or policy documents elsewhere. We have identified some of the links that exist between all the categories in the good corporate citizenship assessment model and other assessment tools or policies in this section.

TRANSPORT	
Planning	NHS Environmental Assessment Tool T1.1-1.13
Service Design and Travel Minimisation	NHS Environmental Assessment Tool T1.1-1.13
