	<i>Paragraph</i>	<i>Page</i>
SUMMARY		1
ENERGY: DEFINITIONS AND UNITS		10
 <i>Part I The global context</i>		
Chapter 1		
THE RADICAL CHALLENGE		13
Chapter 2		
CAUSES AND EFFECTS OF CLIMATE CHANGE		17
The process of global warming	2.2	17
The global carbon cycle	2.10	20
Natural variations	2.14	22
Possible scenarios	2.19	24
Nature and consequences of climate change	2.27	27
Facing the issues	2.36	30
Chapter 3		
POSSIBLE PREVENTIVE MEASURES		33
Managing aspects of the carbon cycle		
Preventing carbon dioxide from reaching the atmosphere	3.4	33
Increasing take up of carbon dioxide by vegetation	3.15	35
Increasing take up of carbon dioxide by the ocean surface	3.24	37
Changing the ways in which energy is obtained and used	3.27	38
Reductions in energy use	3.28	38
Using fossil fuels more efficiently	3.35	40
Substituting other energy sources for fossil fuels	3.44	42
Conclusion	3.53	44

	<i>Paragraph</i>	<i>Page</i>
Chapter 4		
PROSPECTS FOR AN EFFECTIVE GLOBAL RESPONSE		47
A decade of climate diplomacy	4.3	47
The need for international agreement to limit climate change	4.10	48
Framing a response	4.13	50
Economic appraisal	4.21	51
A pragmatic approach	4.29	52
Timing of measures to reduce emissions	4.35	54
The shape of a future international agreement	4.40	54
A <i>per capita</i> basis for emission quotas	4.47	56
UK policy in a global context	4.55	58

Part II The United Kingdom's response

Chapter 5

THE UK'S PRESENT SITUATION AND POLICIES		65
The overall energy situation	5.2	65
UK energy policies	5.12	68
Achieving environmental objectives in liberalised energy markets	5.18	69
Supply of gas and electricity	5.19	70
Electricity generation, transmission and distribution	5.24	72
Implications for environmental objectives	5.27	73
Environmental regulation and policies	5.29	73
Consent for new energy installations	5.30	74
Reducing air pollution	5.34	74
Renewable energy sources	5.38	75
Promoting energy efficiency	5.43	76
Carbon dioxide emissions – the UK Climate Change Programme	5.46	78
Research and development	5.61	81
What kind of energy policies?	5.67	82

	<i>Paragraph</i>	<i>Page</i>
Chapter 6		
REDUCING ENERGY USE		85
Manufacturing industry	6.12	88
The potential for reducing energy consumption	6.17	89
Measures for reducing energy consumption		
Taxation – the climate change levy	6.19	89
Negotiated agreements between government and industry	6.21	90
Regulation – the IPPC Directive	6.25	91
Carbon trading	6.32	92
Advice and information	6.34	92
Commercial and public services	6.36	93
The potential for reducing energy consumption	6.40	93
Measures for reducing energy consumption	6.41	93
Improving the energy efficiency of public and commercial buildings	6.42	94
The climate change levy	6.50	96
Households	6.52	97
The potential for reducing energy consumption	6.56	97
Measures for reducing energy consumption	6.58	99
Household energy prices, taxes and levies	6.59	99
Improving the efficiency of the existing housing stock	6.70	101
Higher efficiency in household electricity use	6.80	103
Higher efficiency standards for new housing	6.88	104
Transport	6.107	109
The potential for reducing energy consumption	6.110	109
Measures for reducing energy consumption	6.113	110
Taxation on vehicles, fuel, road use and workplace car parking	6.114	110
Negotiated agreements with manufacturers	6.123	112
The 18th Report and its aftermath	6.125	112
Aviation and shipping	6.129	114
Combining the potential for reducing energy use from all four sectors	6.132	114
General measures for reducing energy use		
Economic instruments	6.149	117
A carbon tax as part of a package of measures	6.155	118
Institutional arrangements and existing energy efficiency programmes	6.170	121

	<i>Paragraph</i>	<i>Page</i>
Chapter 7		
THE ALTERNATIVES TO FOSSIL FUELS		
		123
Assessing the potential of renewable sources	7.4	124
Large-scale non-carbon sources	7.10	125
Nuclear	7.11	126
Large inland water power schemes	7.20	127
Tidal barrages	7.22	128
Future potential	7.25	128
Other non-carbon sources already available	7.31	130
Wind power	7.32	130
Generating electricity from sunlight	7.39	132
Using heat from the sun	7.44	133
Small inland water power schemes	7.47	133
Future potential	7.48	133
Alternative carbon-based sources	7.54	135
Urban wastes	7.59	136
Agricultural and forestry wastes	7.63	137
Energy crops	7.67	137
Future potential	7.78	139
Technologies requiring further development	7.86	141
Wave power	7.87	141
Tidal streams	7.91	142
Future potential	7.94	143
Current prospects for alternative energy sources	7.101	144
Public acceptance of new energy sources	7.116	149
Chapter 8		
PATTERNS OF ENERGY SUPPLY AND USE		
		153
Heat	8.4	153
Propulsion for transport	8.17	157
Electricity	8.26	159
Using fossil fuels more efficiently	8.27	159
Electricity from non-carbon sources	8.32	160
Future evolution of electricity networks	8.42	161
Energy storage	8.55	165

	<i>Paragraph</i>	<i>Page</i>
Chapter 9		
POSSIBLE UK ENERGY BALANCES IN 2050		171
Four illustrative scenarios	9.8	172
Common features of scenarios	9.27	176
Electricity costs in scenarios	9.30	177
The way forward	9.35	178
 Chapter 10		
ADOPTING A LONG-TERM STRATEGY		181
Why a long-term strategy is needed	10.1	181
The content of a long-term strategy	10.11	183
The European dimension	10.23	185
Economic instruments	10.25	185
Effective institutions		
Whitehall Departments	10.33	187
The Gas and Electricity Markets Authority	10.38	188
A Sustainable Energy Agency	10.44	190
Transmission and distribution	10.49	191
Devolution	10.51	191
Research and development	10.53	192
Implications for other policy areas	10.67	195
The choices before us	10.73	196
 RECOMMENDATIONS		
Key recommendations		199
Other recommendations		201
 REFERENCES		
		209
 APPENDICES		
A: Announcement of the study and invitation to submit evidence		227
B: Conduct of the study		231
C: Seminar: Energy for the world we want, 2 July 1998		241
D: Carbon resources and removal: technical issues		243
E: Illustrative energy balances for the UK in 2050		251
F: Members of the Royal Commission		263
 INDEX		
		267

INFORMATION BOXES

Box 2A	Evidence of natural variations	23
Box 2B	Scenarios for emissions	27
Box 2C	Other greenhouse gases	28
Box 2D	Impacts of climate change on the UK	30
Box 3A	Efficiency of energy conversion	41
Box 4A	Flexibility under the Kyoto Protocol	49
Box 5A	Structure of electricity and gas industries	70
Box 6A	Low energy buildings	95
Box 6B	SAP – energy labels for housing	98
Box 6C	New low energy housing	105
Box 6D	Reducing carbon dioxide emissions from transport	113
Box 7A	Assessing the resource: onshore wind	125
Box 7B	Demonstration plant using biomass	136
Box 7C	Current wave power devices	142
Box 7D	Proposed renewables obligation	147
Box 7E	DTI's classification of new and renewable energy technologies	148
Box 8A	More intelligent use of heat	155
Box 8B	Dinorwig pumped storage scheme	166
Box 8C	Distinction between primary fuels and energy carriers	167
Box 8D	Fuel cells	168
Box 8E	Energy storage using regenerative fuel cells	169
Box 9A	Four scenarios for 2050	173
Box D	Capture of carbon dioxide and re-injection into a sub-sea aquifer	247

TABLES

Table 3.1	Carbon pool in forests and forest soils (1987-1990)	36
Table 4.1	Contraction and convergence: implications for UK carbon dioxide emissions	57
Table 6.1	The scope for reducing UK final energy consumption	115
Table 7.1	Electricity from renewable energy: ETSU's assessment of cost-effective resources in 2025	124
Table E.1	Final energy consumption by sector 1998	252
Table E.2	Forms of end use for 2050 by sector	253
Table E.3	Assumed reductions in demand between 1998 and 2050 by end use	253
Table E.4	Final energy consumption in 2050 by end use	254
Table E.5	Outputs from energy sources in each of the four scenarios	255
Table E.6	Carbon dioxide emissions	260
Table E.7	Number of generating plants required in 2050 under the four scenarios	261

Photographs between pages 84 and 85

- I Sizewell B nuclear power station
- II Didcot coal-fired power station
- III Deeside combined cycle gas turbine power station
- IV Supermarket in Greenwich
- V University building at Norwich

Photographs between pages 130 and 131

- VI Zero energy housing development in London
- VII Tidal stream turbine
- VIII Severn tidal barrage
- IX Offshore wind farm in the Baltic Sea
- X Onshore wind farm in Wales

Photographs between pages 142 and 143

- XI Hydro power scheme in Scotland
- XII Harbour wall wind farm in Northumberland
- XIII Large photovoltaic installation in Wales
- XIV Short rotation willow coppice
- XV Scale model of wave power machine
- XVI Dinorwig pumped storage scheme
